Four-dimensional space - Wikipedia A four-dimensional space or 4D space is a mathematical extension of the concept of three-dimensional or 3D space. Three-dimensional space is the simplest possible generalization of the observation that one only needs three numbers, called dimensions, to describe the sizes or locations of objects in the everyday world. Four-Dimensional Geometry -- from Wolfram MathWorld Four-Dimensional Geometry Four-dimensional geometry is Euclidean geometry extended into one additional dimension . The prefix "hyper-" is usually used to refer to the four- (and higher-) dimensional analogs of three-dimensional objects, e.g., hypercube , hyperplane , hypersphere. Fourth Dimension - Math Forum One way to understand what the fourth dimension "looks like" is to carefully examine what the 3rd dimension looks like to "creatures" living in a 2-dimensional world. If we can understand this, then we can understand some of what the fourth dimension looks like to us creatures living in the 3-D world by using appropriate analogies.

In this groundbreaking study, first published in 1983 and unavailable for over a decade, Linda Dalrymple Henderson demonstrates that two concepts of space beyond immediate perception—the curved spaces of non-Euclidean geometry and, most important, a higher, fourth dimension of space—were central to the development of modern art. The Fourth Dimension: Toward a Geometry of Higher Reality ... The fourth dimension is to three-dimensional space as the third dimension is to two-dimensional space. 4-D:3D::3-D:2-D. This particular analogy is one of the oldest head tricks known to man. Plato was the first to present it, in his famous allegory of the cave.
